# Mobile Office

## **SOFTWARE:**

The Mobile Office application offers the user the ability to execute specific office tasks without the need to be at a fixed or designated location.

## **HARDWARE:**

This is accomplished by running the application on a Windows CE / Windows Mobile device, with additional processes running on the backoffice PC. The Mobile Office device can communicate with the backoffice PC either using a wireless connection or using its cradle.

the backoffice PC either using a wireless connection or using its backoffice PC. The Mobile Office device can communicate with the backoffice PC either using a wireless connection or using its cradle.
